David Oliver's book is a must-read for all lovers of flying boats and amphibians. He covers several different types, some seldom written about in other books - like the Grumman Albatross and the Short Solent. The author brings many interesting anectodes, as well as houndreds of color and B/w photos. The only minus would be that it's too short. A Volume II would be greatyl apreciated!

A nice addition to my collection of aviation books. Flying boats are very fascinating and there are not nearly enough books out there that cover the history of the type that cover the subject very well.

Very good pictures in this edition.
