# Company Goal: Increase Engineering Productivity By 20 Times!: For CEOs Of Technical Firms

## Synopsis

Those that read and follow through on the concepts mentioned in this textbook, should find answers to the following: • What is your Company's Goal/Objective? • How to increase Engineering productivity by many orders of magnitude? • Accelerate Math Model Understanding • Think Outside-The-Box This textbook should be used in conjunction with Parameter Tweaking for Engineers & Scientists. This textbook is for CEOs of technical firms. It includes success story examples, problem-solving applications, and other illustrations. The "Accelerate Math Model Understanding" is very important to one's future. Very important! It has to do with making a change and seeing the affect of the change in minutes. This can give Engineers & Scientists a good feeling for how well their math model is modeling the desired phenomenon. This textbook tries to move today's thinking from solving one problem at a time, to solving all of their project's problems at once in order to achieve an optimum solution. This requires Calculus-level thinking. An analogy might be thinking in terms of Machine code, one bit at a time. Today, computer simulations have people thinking in terms of Algebraic code, one problem at a time. We are trying to move people to Calculus-level code, solving entire projects at a time. This will reduce development time and improve accuracy of their math models.
